DEMO DOCUMENT — FICTIONAL DATA ONLY

NIDAN Sample Clinical Intake Report

Synthetic chest-pain case prepared for OCR and hackathon recording

Patient name	Anjali Patil	**Age**	42 years
Report ID	DEMO-CP-042	**Date**	27 October 2026
Preferred language	English	**Source**	Fictional demo intake

Reason for visit

Patient-reported concern: intermittent central chest discomfort for approximately 2 hours, described as pressure-like. This is a synthetic scenario for demonstration only.

Patient-reported details

Onset	Started while walking; exact onset time is fictional.
Severity	6/10 as reported by the fictional patient.
Associated symptoms	Mild shortness of breath and sweating reported in the sample scenario.
Relevant history	No history supplied in this demo document.
Allergies	None known — fictional sample entry; verify in real care.
Medicines	Paracetamol 500 mg — fictional sample entry, not a prescription.
Tests	ECG and CBC — fictional sample entries; no real results are provided.

Sample tests

Tests: ECG and CBC are listed as fictional sample entries only. No real test was performed and no clinical result is represented.

Sample measurements

Heart rate	96 bpm	**Blood pressure**	138/86 mmHg
Temperature	98.6 °F	**SpO■**	98% on room air

Demo interpretation boundary

This file contains fictional, patient-reported information and invented sample measurements. It is **not a diagnosis, ECG report, treatment plan, or medical advice**. It has not been reviewed by a clinician. In a real situation, chest pain with breathlessness or sweating requires immediate attention from qualified medical staff or local emergency services.

For NIDAN hackathon demonstration and OCR testing only. No real person, hospital, physician, or clinical encounter is represented.
